

Features of Oita City's Onsen  
(Deep Subterranean Thermal Springs)

- The springs have rich colors from amber to black!
- A unique sweet fragrance and soft on your skin!
- After the bath your skin will be silky smooth!

The hot springs in Oita City originate from deep subterranean thermal springs located 600 to 800 meters below the earth's surface. The color of the hot springs can vary from amber to black due to ancient deposits of plant matter and the presence of carbon dioxide gas. These characteristics result in waters with a unique sweet aroma that leaves the skin feeling soft and rejuvenated for who takes a dip. Try it to see the effects on your skin! Additionally, recent research has shown that these mineral-rich deep subterranean thermal springs contain helium and carbon dioxide gas, which are commonly found deep beneath the earth's surface.
